

GENETIC STUDY OF LIVER DISEASE

**Help researchers learn more about
what causes liver disease**

Have you ever had liver disease?

We are interested in learning about the genetics behind why some people develop liver disease. This study will allow us to understand the genetic causes so we can provide better care and treatment.

Participation is voluntary, free, and involves a single blood test.

If you are interested in participating, please contact us:

GENETIC STUDY OF KIDNEY DISEASE

Help researchers learn more about what causes kidney disease

Have you ever had kidney disease?

We are interested in learning about the genetics behind why some people develop kidney disease. This study will allow us to understand the genetic causes so we can provide better care and treatment.

Participation is voluntary, free, and involves a single blood test.

If you are interested in participating, please contact us:
